                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2, Application US/08905445

Patent No. 5864015

GENERAL INFORMATION:
PAPLICANT: Pfreundschuh, Michael
TITLE OF INVENTION: Hodgkin's Disease Associated Molecules And
TITLE OF INVENTION: Uses Thereof
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSE: Felle & Lynch
STREET: 805 Third Avenue
CITY: New York City
STREET: Now York
STREET: Now York
STREET: Diskette, 3.5 inch, 360 kb storage

Sequence 2, Application US/1017277

| Sequence 2, Application US/1017277
| Publication No. US20030185844A1
| GENERAL INFORMATION:
| APPLICANT: Tureci, Ozlem
| APPLICANT: Sahin, Ugur
| APPLICANT: Ramensee, Hans Georg
| APPLICANT: Ramensee, Hans Georg
| APPLICANT: Stevanovic, Stefan
| TITLE OF INVENTION: Method for Determining Presence of Cancer In a Sample By Determ
| TITLE OF INVENTION: Expression of an SSX Gene, Peptides Derived From Said SSX Gene
| TITLE OF INVENTION: Expression of an SSX Gene, Peptides Derived From Said SSX Gene
| TITLE OF INVENTION: Expression of an SSX Gene, Peptides Derived From Said SSX Gene
| TITLE OF INVENTION: UNMER: US/10/177,277
| CURRENT APPLICATION NUMBER: US 09/105,839
| FRIOR APPLICATION NUMBER: US 09/105,839
| PRIOR FILING DATE: 1999-06-26
| PRIOR FILING DATE: 1999-06-26
| PRIOR FILING DATE: 1999-06-26
| PRIOR FILING DATE: 1990-06-26

de Leeuw B., Balemans M., Olde Weghuis D., Geurts van Kessel A.;
If dentification of two alternative fusion genes, SYT-SSX1 and
SYT-SSX2, in t(X.18) [pl.1.2]-posltive synovial sarcomas.";
If Hum. Mol. Genet. 4:1097-1099(1995).
I TISSUB SPECIFICITY: Expressed at high level in the testis.
Expressed at low level in thyroid. Not detected in tonail, colon, lung, spleen, prostate, kidney, striated and smooth muscles.
Detected in rhabdomyosarcoma and fibrosarcoma cell lines. Not detected in mesenchymal and epithelial cell lines.
Colon better detected in mesenchymal and epithelial cell lines.
Colon better detected in the specifically found in more than 80% of translocation that is specifically found in more than 80% of synovial sarroma and produces the SSXT-SSXI or SSXT-SSXI or SSXT-SSXI fusion products. These hybrid processor sprobably responsible for transforming activity, Heterogeneity in the position of the brashpoint can occur (low frequency).

L'SIMILARITY: Belongs to the SSX family.
Colon SIMILARITY: Contains 1 KRAB-related domain.

SEQUENCE OF 139-289 FROM N.A.
BRAINO M., Archidiacono N., Franze N., Rosati M., Rocchi M.,
Ballabio A., Grimaldi G.,
Submitted (AUG-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May be involved in transcriptional regulation.
-!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-PINGER PROTEINS.
Patrosso C., Frattini A., Lucchini F., Repetto M., Sacco M.G., Zoppe M., Vezzoni P., and a constant of the KRAB zinc finger gene subfamily mapped in YACs 1 Mb telomeric of HPRT."; denomics 18:223-229(1993).

-!- CATALYTIC ACTIVITY: ATP + 1-phosphatidy1-1D-myo-inositol 4-phosphate dyl-1D-myo-inositol 4-phosphate dyl-1D-myo-inositol 4-phosphate - ADP + 1-phosphatidy1-1D-myo-inositol 3-d-bisphosphate.
-!- SUBCELLULAR LOCATION: Membrane-associated (By similarity)
-!- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN NORMAL LIVER. HIGH LEVELS ALSO FOUND IN REGENERATING LIVER. VERY LOW LEVELS FOUND IN PROPER LIVER.
-!- DEVELOPMENTAL STAGE: HIGHER LEVELS OF EXPRESSION FOUND IN ADULT LIVER THAN IN FETAL LIVER.
-!- SIMILARITY: Contains 1 C2 domain.
-!- SIMILARITY: Contains 1 D2 domain.
-!- SIMILARITY: Contains 1 phox homology (PX) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- TISSUE SPECIFICITY: Expressed in all tissues examined. The highest level expression was found in the kidney and testis.
-!- PTM: EGF stimulates phosphorylation on Tyr-residues.
-!- SIMILARITY: Contains I EH domain.
-!- SIMILARITY: Contains I EF-hand calcium-binding domain.
-!- AUTION: Ref. 3 sequence differs from that shown due to a frameshift in position 719.
                                                                                                                                                                                                                                                                                   SUBGUIT: Homodimer (Presential). Interacts with RALBPI, CRK and GRB2. Binding to RALBPI does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to an EGF-responsive tyrosine kinase.

RalBP1 associated Eps domain containing protein 1 (RalBP1-interacting protein 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bloecker H., Boecher M., Brandt P., Mewes H.-W., Weil B., Wiemann S., Submitted (JUL-2002) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: May coordinate the cellular actions of activated EGF receptors and Ral-Grpases (By similarity)
-!-SUBUNIT: Homodimer (Potential). Interacts with RALBPI, CRK and GRB2. Binding to RALBPI does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to an EGF-responsive tyrosine kinase (By similarity).
                                                                                                                                                                                                                                                              265 ITCGATCGTTACCAAAATCATTCCCGTGGAAGTCTGCAGCCCGTTTACTACGCATGAAAG

Res. Toxicol. 11:1145-1153(1998).

-!- FUNCTION: This protein is involved in the oxidative metabolism a variety of xenobiotics such as drugs and pesticides.

-!- CATALYTIC ACTIVITY: N,N cimethylaniline + NADPH + O(2) = N,N-dimethylaniline N-oxide + NADP(+) + H(2)O.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro; IPR00159; Adrndx_reductase.

-! FUNCTION: May function as switches in neuronal development.
-! FUNCTION: May function.
-! STUBELLULAR LOCATION: Nuclear.
-! TISSUE SPECIFICITY: Low level expression is seen in undifferentiated proliferating cells of neural epithelium. A greater expression is seen in the maturing neurons after they leave the neural epithelium. It is also found in the gut epithelium and adrenal medulla.
-! SIMILARITY: Contains I HMG box domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SECURINCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lania L.;

"Isolation of cDNAs encoding finger proteins and measurement of the
"Isolation of cDNAs levels during myeloid terminal differentiation.";

Corresponding mRNA levels during myeloid terminal differentiation.";

Nucleic Acids Res. 16:4227-4237(1988).

-! FUNCTION: INVOLVED IN CELL DIFFERENTIATION AND/OR PROLIFERATION.

-! SUBCELLULAR LOCATION: Nuclear (Potential).

-! SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-
FINGER PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE-92051312; PubMed-1945843; Rosati M., Marino M., Franze A., Tramontano A., Grimaldi G.; "Members of the zinc finger protein gene family sharing a conserved N-terminal module.";
